Blockchain introduction from Pistoia Alliance

While researching some material for a blockchain discussion and another post, I came across this presentation from the Pistoia Alliance, given by Wolfgang Prinz and Wolfgang Gräther, Fraunhofer FIT Hosted by Richard Shute as a webinar in advance of their blockchain bootcamp.

What I like especially about this presentation is the exploration of use cases – it should get you stimulated to think about the possibilities of this approach, especially as a cross platform, secure transaction record!

Their talk goes into Smart Contracts based on blockchain, and explores some of the implications as well as potential use cases.

The deck is worth exploring, and using as a starting point for additional thinking.
